

# Taking Charge of Your Future: the Story of a Physicist Working With Batteries

Please Join Us to Hear  
*Doing physics for a living*  
Jessica Sligh, Yuasa Battery, Inc.  
Monday November 3, 2008, 7-8 pm  
Boehm Science Building Room 145

Jessica Sligh wanted to *apply* her knowledge of physics to solve real-world problems. Many physicists quietly do their research within the ivory towers of academia. Jess wanted to *be* a professional physicist, designing, making, and testing the some of the technologies that power the tools and vehicles we use in our everyday lives. There can be life after college!

Jessica Sligh will share her stories of her experiences as a professional physicist working in industry.  
**Everyone is welcome!**
