

Have Geophones - Will Travel

Dr. Samantha Hansen
Pennsylvania State University

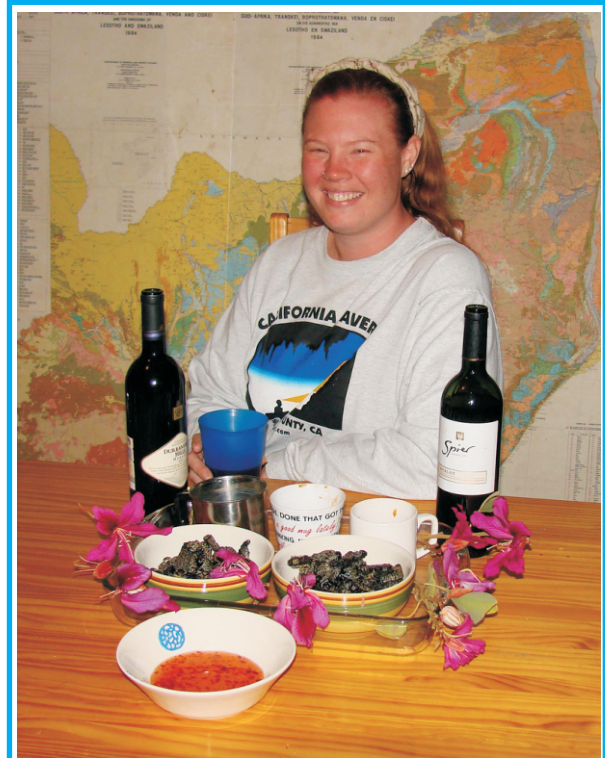

Please Join Us!
Monday April 26, 2010, 7-8 pm
Boehm Science Building Room 262

Dr. Hansen studies the Earth's structure beneath the Antarctic ice sheet, Sub-Saharan Africa, the Arabian Peninsula, and Hawaii's active Kilauea volcanoes! Traveling to such diverse physical and cultural environments presents special challenges for a scientist - hurdles that make research difficult and especially *enriching*.

Dr. Hansen's research exemplifies the modern international scientific researcher - applying her knowledge, skills, and curiosity toward answering important questions wherever they may take her. Dr. Hansen will tell us of her journeys and what life is like as an international research scientist!

Everyone is welcome!
