Date: _____

Digit Symmetry Handout

Rules: This is a one player game. By completing the puzzle and handing in this worksheet the player will receive 5 extra points on the next test.

How to play: On the bulletin board you will find folders containing the digits 0, 1, 2, 5, 6, 8, and 9. Place the digits onto the black board so that the sum of the first two rows will remain the same when the board is rotated 180 degrees. Digits can be repeated and any digit can appear in any spot.

When the puzzle is completed fill in the grid below with the correct answer, place this worksheet into the turn it in folder, and place the digits back into their folders on the bulletin board.
