Locust Lake State Park
Recreational Reservoir
Dam, Discharge, and Holding Ponds
Locust Creek feeds Locust Lake just beyond this meander.

Stream terminology –
Point Bar
Cut Bank
Tour of Lehigh Anthracite with John Hadesty

Overview of the site and sorting process
Lehigh Anthracite is an 8000 acre area. Mining occurs on a small portion of that.
The base rock contains remnants of old deep mines. Modern equipment facilitates the mining process.
Modern equipment enables Lehigh Anthracite to re-mine old deep mines
Discharge from Lehigh Anthracite – AMD is treated for pH and iron before entering the Little Schuylkill River
