Kutztown University

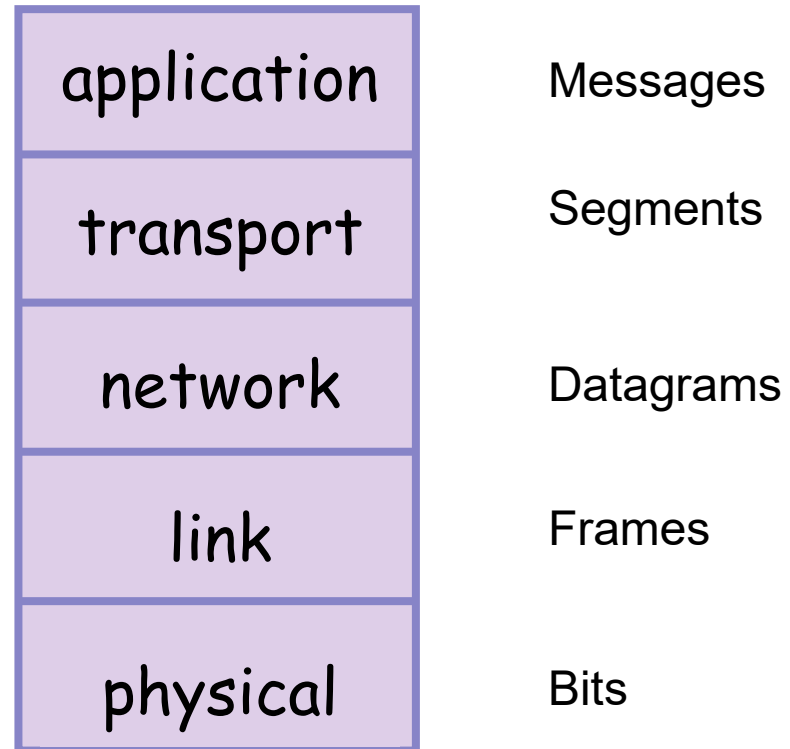

Protocol

- Syntax
 - ▶ Data formats
 - ▶ Signal levels
- Semantics
 - ▶ Control information
 - ▶ Error handling
- Timing
 - ▶ Speed matching
 - ▶ Sequencing

Layered Protocol Architecture

- ▶ Each layer is layer-n
- ▶ Layer-n Protocol Data Units or PDUs
- ▶ Protocol Stack

The Internet Protocol Stack

Internet vs. OSI Stacks

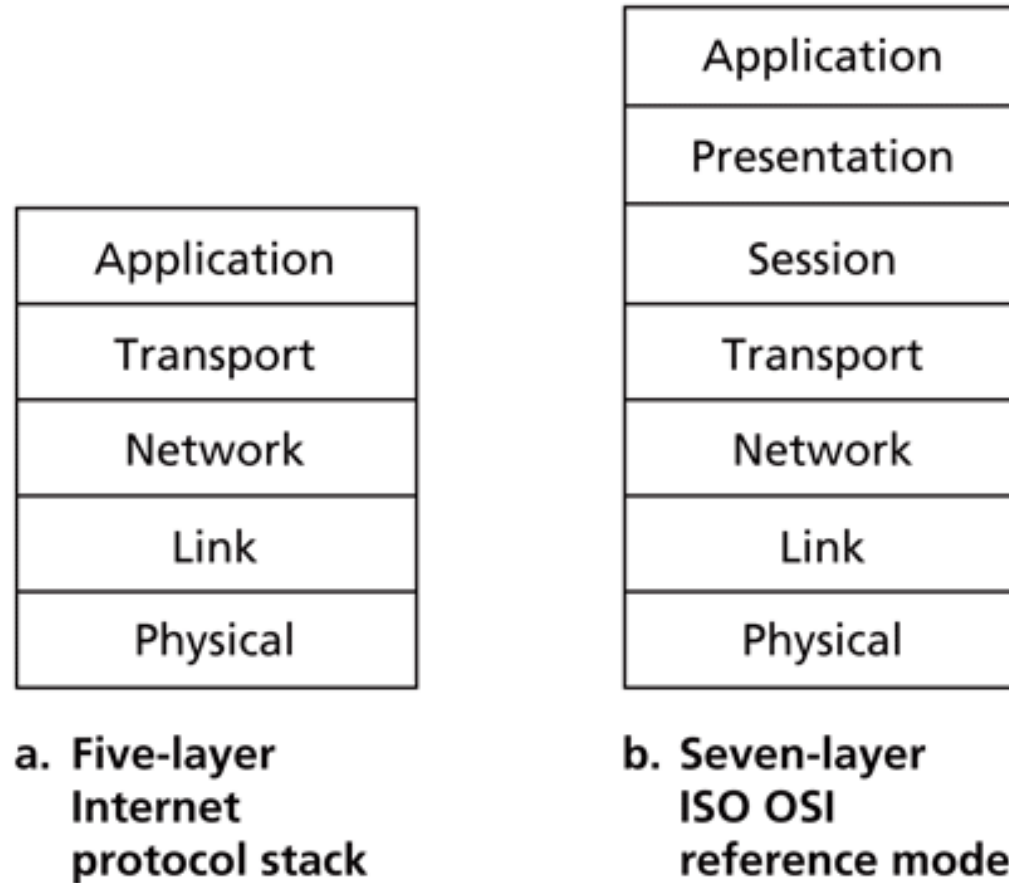

Figure 1.19 ♦ The Internet protocol stack (a) and OSI reference model (b)

Transport Layer Protocols

TCP and UDP

- ▶ Which protocol is better for the application?
- ▶ TCP - *stream sockets*
- ▶ UDP - *datagram sockets*

**Due to Coronavirus
(COVID19) all TCP
applications are being
converted to UDP to avoid
Handshakes.**

Connectionless vs. Connection-Oriented

- ▶ Protocol for each
- ▶ Benefits of each
- ▶ Drawbacks of each
- ▶ Difference from developer's view?
- ▶ Why would a developer select UDP?
- ▶ What if application requires both primary characteristics?

Discussion Question

- ▶ Connectionless or Connection-Oriented?
 - ▶ Telnet
 - ▶ FTP
 - ▶ DNS
 - ▶ HTTP
 - ▶ Streaming
 - ▶ SMTP (email)
 - ▶ NFS (Network File System)
