Lab #3 – SNMP

Purpose
To learn how SNMP operates and to use SNMP to view some router/switch information.

Procedure
1. Assign values to the following MIB variables in your switch
   a. sysContact
   b. sysLocation
   c. sysName
2. Obtain snmpget.exe and snmpwalk.exe files, which are from the net-snmp application, from the course web site and store on your U: drive or the C: drive of one of the clients on your test network.
3. Use the appropriate net-snmp program to do an snmpwalk of the mgmt.system subtree
4. Use the appropriate net-snmp program to do an snmpget of the sysName and sysLocation variables

Turn in
1. All successful commands used to complete the above steps
2. Screenshot or script file of the results of steps #3 and #4
