

The Semantic Web

CSC480: Semantic
Web Technologies

Dr. Lisa Frye

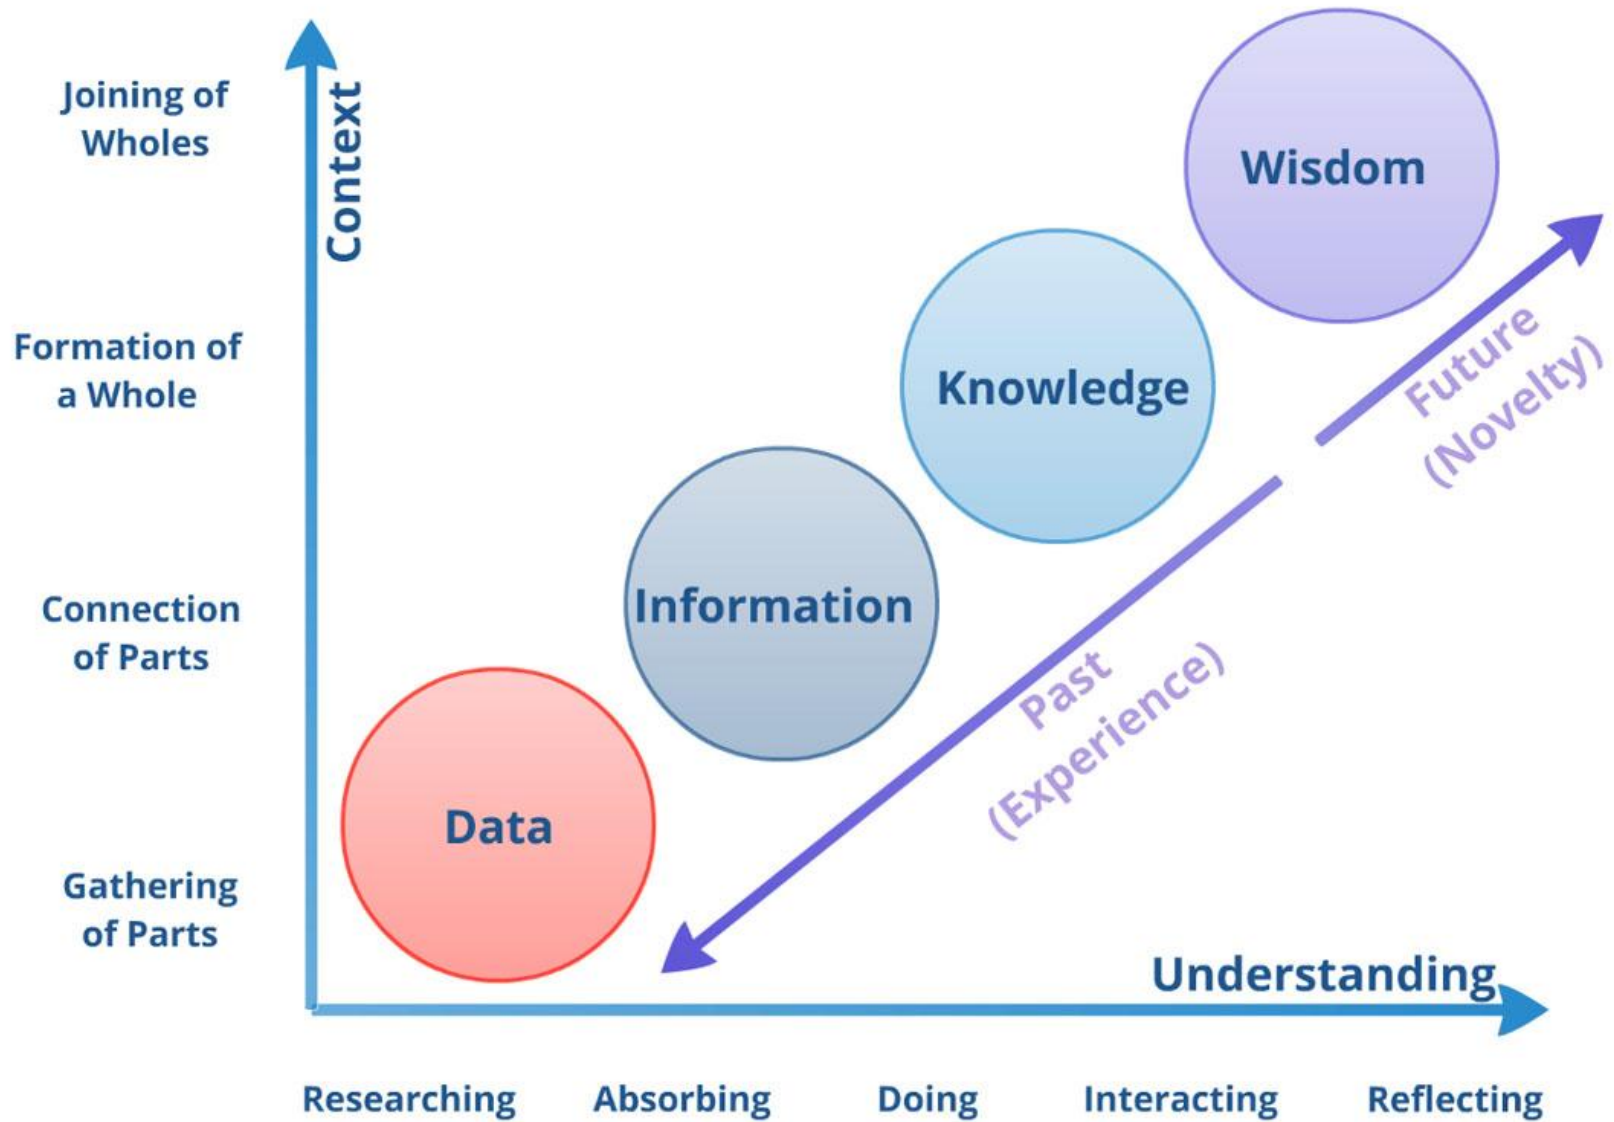

frye@kutztown.edu

Kutztown University

Course Objectives

- Summarize the use of Description Logic in knowledge representation.
- Explain the rationale and advantages of the Semantic Web.
- Create an XML document.
- Describe the RDF syntax.
- Explain the utilization of XML and RDF Schema.
- Analyze an RDF graph.
- Summarize the advantages of ontology.
- Produce the OWL definition file for a specific domain.
- Design an ontology-based application.
- Identify the optimal knowledge representation language for specified applications.

A word cloud visualization of terms related to knowledge, data, and information. The words are of various sizes and orientations, with 'knowledge', 'data', and 'information' being the largest. Other prominent words include 'questions', 'understanding', 'answers', 'world', 'meaning', and 'wisdom'. The words are arranged in a roughly circular pattern, with 'knowledge' at the top, 'data' in the center, and 'information' at the bottom. The colors range from dark blue to brown.

adapted from a classic paper titled "From Data to Wisdom" by Russ Ackoff

Web

- Text and images
- Computer role?
- Search
- Web 2.0
- Web 3.0

Semantic Web

- “The extension of the World Wide Web that enables people to share *content* beyond the boundaries of applications and websites.”
(from <http://semanticweb.org>)

Semantic Web Design Principles

- Make structured and semi-structured data available in standardized formats on the web → ***labeled graphs*** (RDF)
- Make not just the datasets, but also the individual data-elements and their relationships accessible on the web → ***web identifiers*** (URIs)
- Describe the intended semantics of such data in a formalism, so that this intended semantics can be processed by machines → ***ontologies***

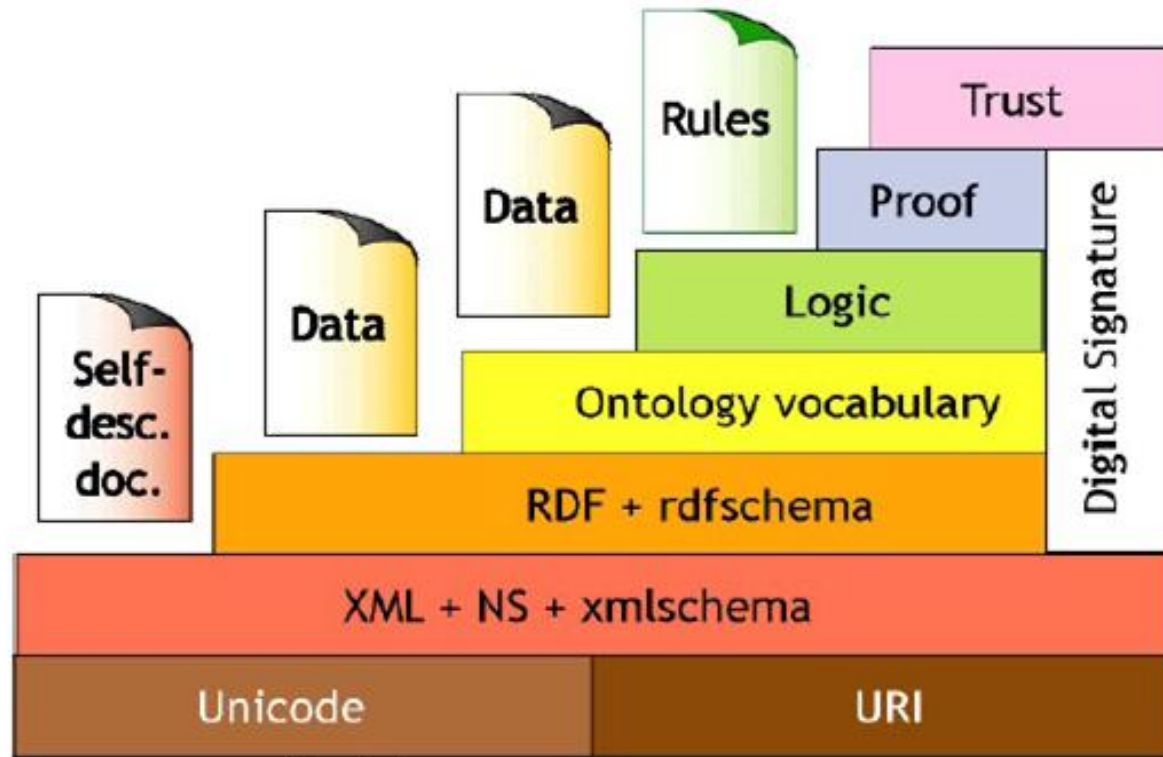

Advantages

- Ubiquitous networking
- Open everything
- Adaptive information
- Adaptive service clouds
- Federated data
- Simulated intelligence
- Automated tools

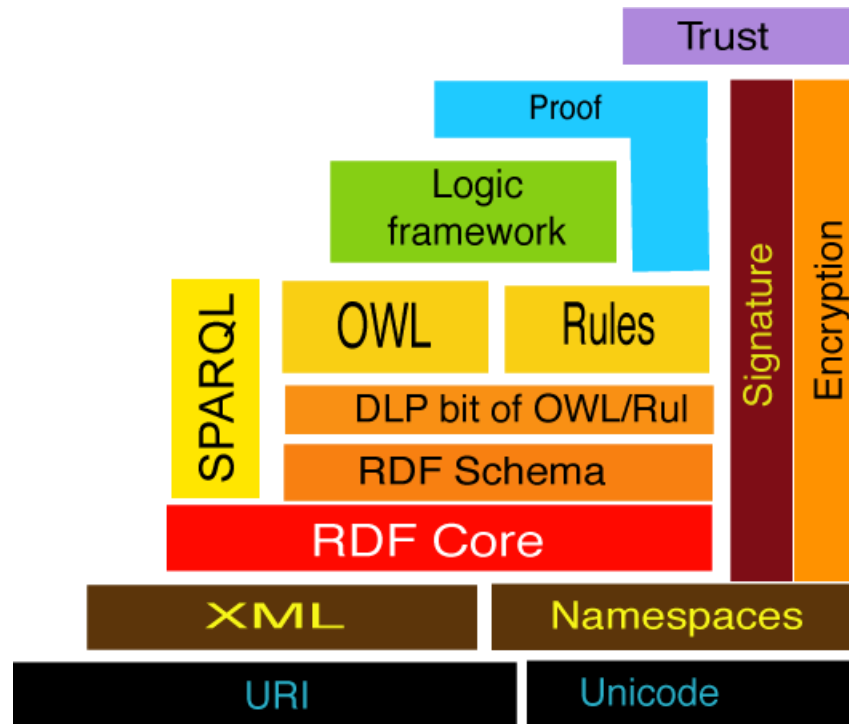

Semantic Applications

- Triplt – <http://www.tripit.com>
- ZoomInfo – <http://www.zoominfo.com>
- tvtag- <http://tvtag.com>
- Dbpedia - <http://dbpedia.org/About>
- Semantic email applications
- Semantic blogging – Zemanta - <http://www.zemanta.com>
- Semantic Wikis
- Friend Of A Friend (FOAF)

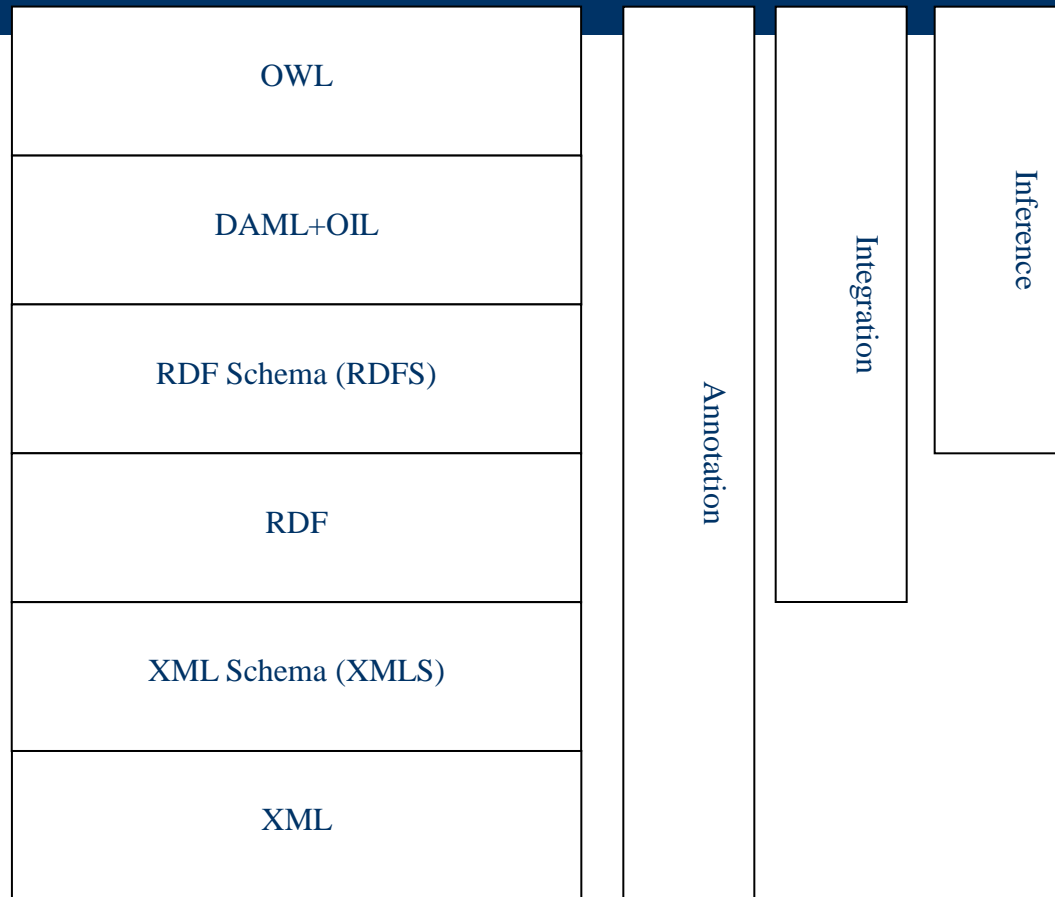

The Semantic Web Layer Tower

Alternative Semantic Web Stack

Markup Languages

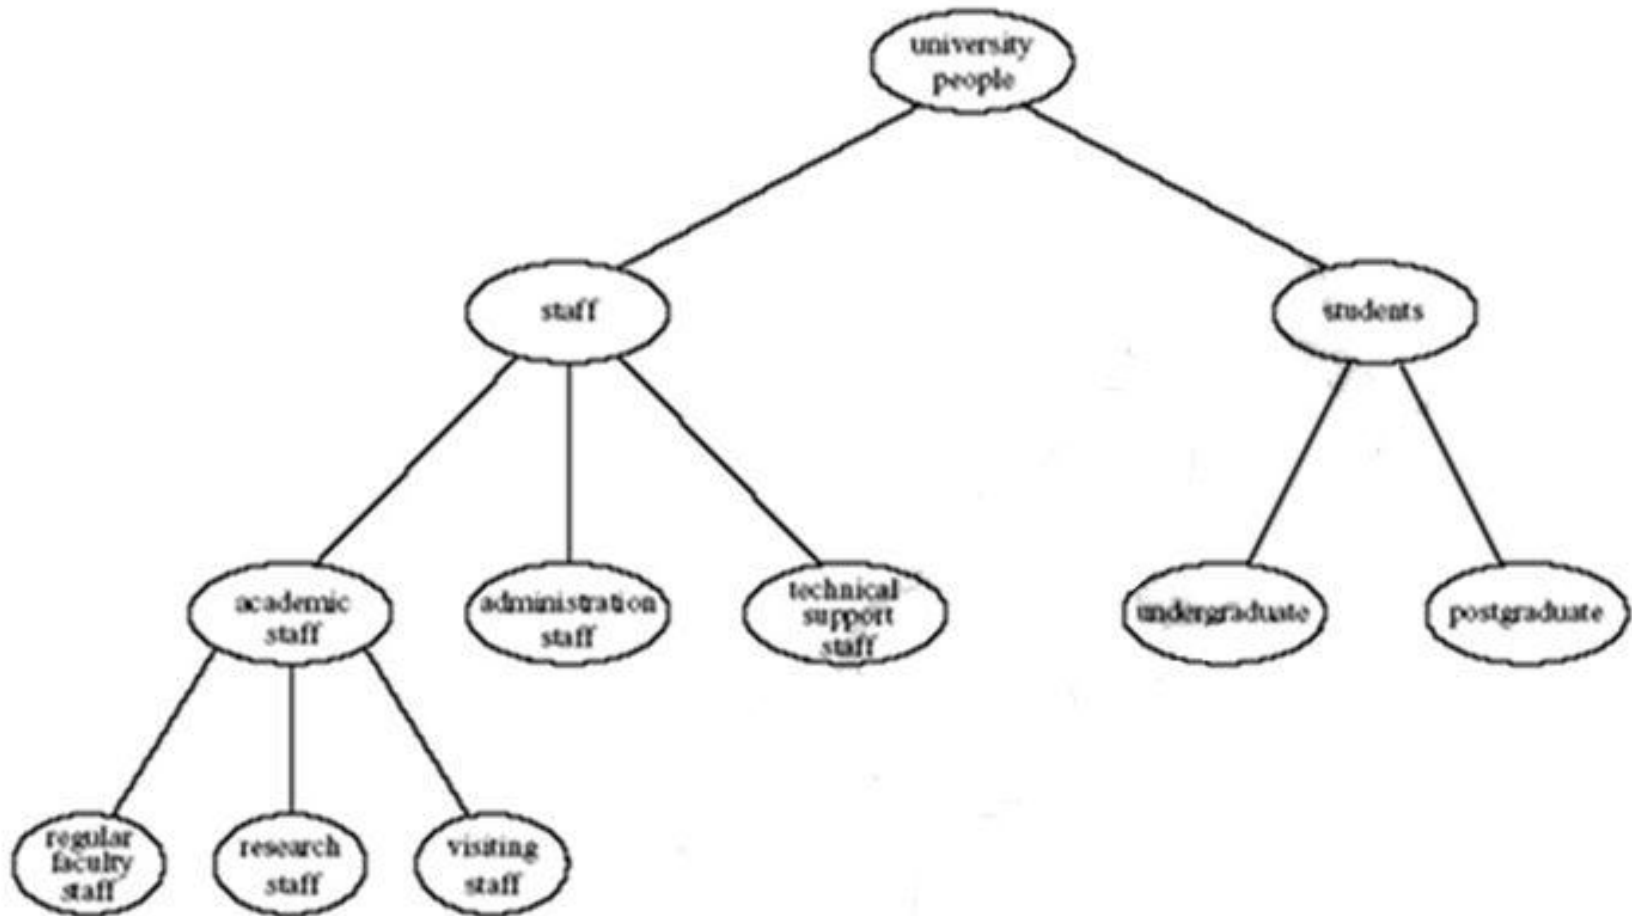

Semantic Web Layers

- XML layer
 - Syntactic basis
 - XML Schema
- RDF layer
 - RDF basic data model for facts
 - RDF Schema simple ontology language
- Ontology layer
 - More expressive languages than RDF Schema
 - Current Web standard: OWL

Semantic Web Layers (2)

- Logic layer
 - enhance ontology languages further
 - application-specific declarative knowledge
- Proof layer
 - Proof generation, exchange, validation
- Trust layer
 - Digital signatures
 - recommendations, rating agencies

Ontology Languages

- RDF Schema
- DAML+OIL
- OWL
