

Student Instructions for turnin

Initial Setup

1. Run the script (from professor's public directory) `turnin.pl` (Note that the argument is just the course number; do not include the CSC prefix).
`/export/home/public/frye/turnin.pl <course_number>`

Submit Assignment

Note: If you just did the initial setup, you must logout and log back in before submitting an assignment.

1. Run `turninXXX <grade / debug> file1 file2 ...`
 - a. `grade / debug`: If you are turning your assignment in for debugging help, specify `debug` as the second argument; if you are turning your assignment in for grading, specify `grade` as the second argument.
 - b. `XXX` is the course number and each file is whitespace delimited. Note that wildcards are allowed, but directories can't be submitted.

The program will send an E-mail confirming that you submitted the correct files. It will show an `ls -l` of the user's subdirectory of the project's directory under `turnin`. Be sure that the directory listing includes the file(s) you just submitted!
